

Installing Ensembles Binaries

1. Drag the framework bundle *Ensembles.framework* from the *iOS* or *OS X* folder into your Xcode project source list.
2. In the sheet that appears, make sure you check the *Copy items into destination group's folder* option, make sure your app target is checked, and then click *Finish*.

3. Select the project root in the source list on the left, and then select your app's target. In the General section, local the *Embedded Binaries* section. Click the +, and add *Ensembles.framework*.
